00:07:01   michaelrath: I have a question not related to the subject of this meeting but is the cause of being late. My time and date doesn't allow me to change time zone
00:16:31   ken falls: Good Morning Chita
00:16:56   Donna Warnock: How do I add my photo? I can't find it.
00:17:09   Mark Carhart: Good morning from Las Vegas.
00:18:28   Joe Grillo: Sorry. I was ordering from Amazon and listening to the conversation about location
00:19:00   Gill Patten: Good afternoon from Cheshire, UK.
00:20:40   Jane Wood: Does the NMUG website offer the opportunity for us to review the AI meeting reports? Or can we see a report in another way? Thanks.
00:21:32   Johannes Korte-Möhlenkamp: Good morning from Hamburg, Germany
00:21:58   Dan Wassink: I add the AI summary to the event page usually within a day or 2. 😊
00:22:04   Timothy Childers: Greetings from Sarasota FL.
00:22:27   Dan Wassink: Christians Download is also available on the site. https://naplesmug.com/event/christian-boyce-joins-is-with-a-topic-yet-to-be-determined/
00:23:39   Jane Wood: Thanks, Dan. Can you let me know where I can find this Event page?
00:28:23   Dan Wassink: Replying to "Thanks, Dan. Can you..."

After this meeting is over, it will be under Meetings>Past Meetings on the site. Make sense?
00:28:41   Conrad Revak: Perhaps you can answer this during your talk. Sometimes when I'm doing heavy photo editing in the Photos app, I get a cryptic message: Apple can not edit your photos. Please try again later" They don't say it's overheated, but I think that's it. My Mac Studio is only four months old, with M2 Max chip. Any comments? Suggestions?
00:30:27   Elliott Cobin: Replying to "Perhaps you can answ..."

Close your other apps to free up the ram for photo processing — that usually works for me.
00:30:49   Jane Wood: Yes, Dan, makes sense. I'm curious what AI Companion comes up with. Thanks!
00:31:59   Lynda Farabee: What's the first icon? Option? Then Shift, command, V?
00:32:59   Chita Hunter: Replying to "Screenshot 2023-11-15 at 10.42.32 AM.jpg"

That's for entering text and matching the style of the existing text.
00:33:22   Lynda Farabee: Need mind….it is option. Boy that's hard to do…option-shift-command-V!
00:33:25   Gerrie Shults: Replying to "Screenshot 2023-11-15 at 10.42.32 AM.jpg"

The first icon is the Option key
00:41:51   Timothy Childers: Wish there was a way to do the
'paste and match format' with fewer keys! I use it dozens of times per
day!
00:42:07   Lynda Farabee: Reacted to "Wish there was a way..."
with 👍🏼
00:42:35   Lynda Farabee: Replying to "Screenshot 2023-11-15 at
10.42.32 AM.jpg"

👍🏼
00:44:36   Ed Adams: A hint, if you change the size of the
cursor on your Mac if you use Photoshop your brushes will not look
right.
00:45:12   Chita Hunter: Replying to "Wish there was a way..."

You might be able to change this in Settings > Keyboard > Keyboard
Navigation > Keyboard Shortcuts > add the Pages app and change the
shortcut to the command.
00:51:49   Gerrie Shults: Another tip with three-finger drag:
When you reach any edge of the trackpad, but want to move further,
quickly lift your fingers and place them back on the other side, and
you can continue the drag.
00:52:23   Tim Baker-CMUG/ACD: if you already use a "three
fingers to swipe to change desktops", you have to change that setting.
00:55:47   Hank Humphrey: Stage Mgr question—Ventura will not
keep position of windows steady from last time used
00:57:17   nancy garrison: My Function keys (F2) has already been
assigned — what happens if I re-assign a new function (mail)? What
happens to the previous function?
00:57:36   Chita Hunter: Replying to "My Function keys (F2..."

Gets overwritten.
01:00:01   Fred Hathorn: If HotKey overrides built in keystroke
function, how do you get back to original keystroke function, e.g. F3
normally is mission control, if you change to Calendar, how do you get
back to mission control?
01:03:40   Gerrie Shults: For my app/website launcher I use the
free version of Raycast. I can't begin to describe how to use it and
what it does here, but it keeps you on the keyboard, is incredibly
flexible and lets you use your own mnemonics for anything.
01:03:57   Ferrers Young: Reacted to "For my app/website l..."
with 👍🏼
01:03:58   Ed Adams: couldn't you just put a modifier key
in front of the choice in hotkey?
01:04:02   Gerrie Shults: Replying to "For my app/website l..."

That's at raycast.com
01:09:06   Gerrie Shults: Replying to "For my app/website l..."

I launch Calendar with ⌘—Space, C, Return. In place of 'C', M opens to mail, S opens to Safari, 'az' opens Amazon, 'yn' opens YNAB, my budget app website, and on and on.
01:12:18   Greg Purdom: Can I program a function key to open an app on my second monitor (extended display) instead of my main display?
01:13:38   Cynthia Nicholson: Can you retain the issued number on the image and change the text?
01:19:46   Ed Adams: The search in settings is really important because apple made so many changes in Ventura then sonoma
01:21:58   Timothy Childers: Is there a list of 'all the system settings somewhere, or a way to list them?
01:24:12   Nello Lucchesi (Chicago):   Moom is good too. https://manytricks.com/moom/
01:24:20   Ferrers Young: Reacted to "Moom is good too. ht..." with 👍
01:26:23   Billy McKee: How to put a window on another monitor rather than main desktop?
01:26:45   Ann MacKay: Does the tile window option to put screens side by side do the same thing that Rectangle does?
01:30:43   Ihor Charischak: Chris — terrific presentation. You should write a book on this topic!
01:31:40   Gail Lawley: Great refresher for me and I learned some new things. Thanks a bunch!
01:31:46   Travis J Harder — He/Him/His: Thanks Christian! Always informative and fun!
01:31:54   Mike Kwasniak: Don't forget that booking has now opened for our fabulous 2024 classes, which run thru January, February and March. Visit www.naplesmug.com and click on CLASSES to learn more!
01:32:04   Ed Adams: I would also recommend cinch (free) which allows a more simpler way to move apps to set locations. Also I've used Alfred for years to do many of these features and last my mouse and keyboard have apps that do these features as well
